Claim Amendments

Claim 1 (currently-amended): A method of aligning a rubber blanket configuration ~~formed with substantially u-shaped register cut-outs~~, relative to a clamping device having register pins, for clamping the rubber blanket configuration onto a cylinder, which comprises:

providing the rubber blanket configuration with a clamping bar having substantially u-shaped register cut-outs formed therein; and

bringing the substantially u-shaped register cut-outs formed in the ~~rubber blanket configuration~~ clamping bar into contact with the register pins of the clamping device when the clamping device has been applied to the cylinder.

Claim 2 (currently-amended): A rubber blanket configuration, comprising:

~~a rubber blanket formed of a blanket material; and said rubber blanket having a blanket material and a clamping bar with substantially u-shaped register cut-outs formed therein;~~

said blanket material having an upperside layer and an
underside layer; and

said clamping bar being disposed only on said underside layer.

C
Continued

Claim 3 (currently-amended): The rubber blanket configuration according to claim 2, wherein said clamping bar is disposed only on an underside of the ~~blanket~~ material of said underside layer.

Claim 4 (previously-presented): The rubber blanket configuration according to claim 2, wherein said clamping bar projects beyond an edge of the blanket material.

Claim 5 (previously-presented): The rubber blanket configuration according to claim 4, wherein said edge is a leading edge of the blanket material.

Claim 6 (previously-presented): The rubber blanket configuration according to claim 2, wherein the register cut-outs are formed only in said clamping bar.

Claim 7 (previously-presented): The rubber blanket configuration according to claim 2, including a sealing

substance provided in at least one corner angle between the
blanket material and said clamping bar.

Claim 8 (currently-amended): An assembly, comprising:

a rubber blanket configuration ~~formed of~~ having a blanket
material;

said rubber blanket configuration having a clamping bar with
substantially u-shaped register cut-outs formed therein; and

a clamping device fastening said rubber blanket configuration
to a cylinder, said clamping device only gripping only said
clamping bar.

Claim 9 (currently-amended): A register system, comprising:

a flexographic printing plate with substantially u-shaped
register cutouts formed therein; and

a rubber blanket configuration having structures defining
further substantially u-shaped register cutouts, disposed in
the rubber blanket configuration and corresponding to said
substantially u-shaped register cutouts of said printing
plate.

Claim 10 (currently-amended): A printing machine, comprising:

~~a rubber blanket configuration being formed of a blanket material, said rubber blanket configuration including a~~
~~blanket material and a clamping bar having substantially u-~~
~~shaped register cut-outs formed therein;~~

said blanket material having an upperside layer and an
underside layer; and

said clamping bar being disposed only on said underside layer.

Claim 11 (currently-amended): A varnishing machine,
comprising:

~~a rubber blanket configuration being formed of a blanket material, said rubber blanket configuration including a~~
~~blanket material and a clamping bar having substantially u-~~
~~shaped register cut-outs formed therein,~~

said blanket material having an upperside layer and an
underside layer; and

said clamping bar being disposed only on said underside layer.
